COVER LETTER

July 15, 2026

TO: Hiring Manager

FROM: Tan Dara, Cloud & Infrastructure Engineer

Dear Hiring Manager,

I am writing to express my interest in the Cloud & Infrastructure Engineer position at your company. As a developer with hands-on experience across full-stack development, containerized deployment, and cloud infrastructure, I am confident in my ability to support your team's infrastructure and engineering goals.

In my personal projects, I have containerized and deployed applications with Docker and Kubernetes on Ubuntu-based cloud environments, configuring load balancing and networking with NGINX and Istio. I have also set up CI/CD pipelines with Jenkins and ArgoCD, and monitored deployed services using Grafana — giving me practical exposure to the full lifecycle of shipping and operating software in the cloud.

As an instructor at the Korea Software HRD Center, I guide students through setting up Kubernetes cluster load balancers, covering core networking and traffic-routing concepts. This role has sharpened both my technical understanding and my ability to explain complex infrastructure concepts clearly — a skill I bring to any team I work with.

I am self-directed in building my infrastructure skills, learning Linux administration, containerization, and cloud deployment through coursework and continuous hands-on practice. I am eager to bring this same initiative to a team where I can keep growing into infrastructure engineering while contributing my existing development skills.

Thank you for your time and consideration. I look forward to the opportunity to discuss how my skills and experience align with your team's needs.

Sincerely,

Tan Dara
